

Josué García

Backend Developer | Java | Spring Boot | Microservices | AWS | Azure
Ambato, Tungurahua, Ecuador | josuegarcab2@hotmail.com | +593 98 493 5153
GitHub: github.com/JosueGarciaAbata | Portfolio: josuegarcab.vercel.app

Summary

Backend Developer focused on designing and developing REST APIs and microservices architectures with Java and Spring Boot. Experience building scalable backend services, working with relational databases, Docker, continuous integration, and backend testing. Knowledgeable in security with Spring Security and JWT.

Skills

Backend: Java 8+, Spring Boot, Spring Cloud, Spring Security, JWT, REST APIs, Microservices

Databases: PostgreSQL, MySQL, Oracle, Redis

DevOps / Cloud: Docker, Jenkins, GitHub Actions, AWS, Azure

Testing / Quality: JUnit 5, Mockito, JaCoCo, SonarQube

Frontend: Angular, React, HTML/CSS, JavaScript, TypeScript

Projects

Event reservation management system — Backend Developer January 2026 – February 2026

- Executed load tests with Gatling (1000 simultaneous reservations), validating 100% data consistency and no duplicates.
- Implemented Redis distributed locking to manage contention in seat reservations, reducing median latency by 67% with 1000 concurrent users.
- Optimized transaction scope to reduce connection pool contention, increasing system throughput by 25%.

Hospital management system — Backend Developer October 2025 – December 2025

- Built a distributed hospital management system with 6 microservices using Java, Spring Boot, and Spring Cloud.
- Implemented service discovery using Spring Cloud Eureka for dynamic microservice registration.
- Configured an API Gateway to centralize routing between services.
- Applied the Circuit Breaker pattern with Spring Cloud Circuit Breaker to improve system resilience.
- Containerized all microservices using Docker for consistent deployments.
- Deployed each microservice independently on Azure.
- Integrated frontend interfaces with React for key application modules.

Post moderation system — Backend Developer October 2025 – November 2025

- Developed the backend with Java and Spring Boot, designing REST APIs for core logic.
- Implemented continuous integration pipelines with Jenkins to automate builds and tests.
- Containerized the application with Docker to standardize environments and facilitate deployments.
- Developed frontend modules with React for issue management and post appeal interfaces.

Education

Software Engineering

Universidad Técnica de Ambato

2022 – Present

Languages

Spanish — Native

English — Intermediate

Certifications

Spring Framework 6 and Spring Boot 3 — Udemy

Relational Databases (Intermediate) — Udemy
